

3 BALL LIQUOR POUR

## Anatomy of a Precision Pour collared style

Precision Pour® 3 Ball Liquor Pours feature a number of patented improvements over similar style measured pour spouts. Among these features are the following innovations:

- 1 A lock-on collar for easier removal of the spout from the bottle.
- 2 A new valve alongside the main cylinder to prevent after-drip and eliminate waste.
- 3 Three ball bearings rather than the old standard two, for a smoother, more accurate pour!
- 4 A primer ring to channel liquor around the inner ball bearing for a smooth pour with less sticking.
- 5 A new bottom design which ensures that the ball bearings will never fall out and into the bottle.

Precision Pour® 3 Ball Liquor Pours are available in five colors and a number of configurations including our fliptop seal which protects your liquor inventory from fruit flies and contaminants.
